

We modernize, develop and quickly deploy new IT capabilities so you can serve people and customers better via intuitive, secure and connected systems.

VALVE

Move faster, less interruption

Move your business from On-premise to the adaptable Microsoft Cloud CRM using VALVE – our flexible integration tool that connects your On-premise CRM and seamlessly retrieves its data model before we build a personalized migration plan for you.

Speedy transfer, low down-time

Instead of uploading your entire dataset at once – VALVE takes a snapshot of your current production database, mirrors your data and synchronizes the two systems (On-premise and the Cloud) together so we can upload the differences between the two databases.

Keep in mind, by this time the bulk of your data has already been transferred by your customized migration plan and all we're doing now is checking, syncing and transferring any remaining data to the Cloud.
